

DATA EAST PINBALL, INC.

SERVICE BULLETIN

ATTN: SERVICE MANAGER

GAME: Secret Service Pinball

DATE: September 9, 1988

SUBJECT: Preventative Maintenance
for the Flipper End of
Stroke Switch.

#013

-
- SYMPTOM:** The long blade of the end of stroke switch (EOS Sw.) breaks where it comes out of the body of the switch.
- PROBLEM:** The EOS Sw. actuator screw is too long. This results in excessive flexing of the long blade which causes it to eventually snap near the switch body.
- SOLUTION:** Remove and replace the EOS Sw. actuator screw and cap with those enclosed.

Pete Gustafson
Field Service Manager
