Subject: Stealth Coating Maintenance

Starting with Star Trek Pinball, Data East is providing a new "Stealth" Top Coating on the playfield surface. This new coating has been proven very effective in it's several years on test, but for maximum life, a regular cleaning maintenance should be performed.

We recommend Novus plastic polish #2 for the best performance. This polish is both, a cleaner and protectant, and should be used on a weekly or biweekly basis to insure the long life of the playfield. In addition, this same cleaner may be used on plastic ramps in the game, because it does not contain petroleum byproducts. It will not discolor or "fog up" the plastics as other cleaners might. Distributors may order this product from Data East USA Parts Department at 800-634-7270 or 408 286-7080.
